

UNSEALED

Neuroweapons in the Epstein Files

Database-driven investigation into neurotechnology, defense applications, and the Gates–Epstein network.

Unsealed Research Team

2019

bgC3 proposed neurotechnologies as weapons deliverable to Gates — Epstein edited the draft and replied ok

Neuroweapons in the Epstein Files: A Database-Driven Investigation

An analysis of neurotechnology, defense applications, and the Gates–Epstein network based on primary source documents from the DOJ Epstein Files release, cross-referenced against the Unsealed email archive and kabasshouse intelligence database.

Executive Summary

A systematic search of the Unsealed databases reveals that Jeffrey Epstein maintained a decade-long, deliberate engagement with neurotechnology research — not as a passive philanthropist, but as an active coordinator positioning himself at the intersection of cutting-edge brain science, billionaire capital, and defense applications.

The investigation began with a narrow set of EFTA document IDs cited by independent researchers on X. Expanding that search across **three databases** (kabasshouse.db, jmail.db, unsealed.db) and **73,000+ emails** uncovered a far larger story: a network of Nobel laureates, DARPA directors, MIT researchers, and tech billionaires — with Epstein at the center, actively editing proposals, directing presentations, and brokering introductions between the scientific and intelligence communities.

Key findings:

- A March 2017 proposal to Bill Gates explicitly listed “**Neurotechnologies as weapons in national intelligence and defense**” as a deliverable for Gates’s private think tank, bgC3. Epstein received this proposal and replied “ok.”
- The same proposal included a “**Strain pandemic simulation**” — two years before Event 201.
- Melanie Walker, the neurosurgeon who authored the proposal, simultaneously reported to Epstein on Gates’s private activities while managing **\$300 million in Gates Foundation portfolios**.
- Epstein hosted a “**secret society**” of neuroscientists including Ed Boyden (optogenetics pioneer) and Joi Ito, organizing dinners that mixed brain-control research with Mark Zuckerberg, Elon Musk, Peter Thiel, and Reid Hoffman.
- A proposed neurotechnology startup called “**Modern Neuron**” was pitched to Epstein with advisors including two Nobel laureates, a former DARPA director, and the former head of NIMH.
- Epstein offered to connect **William Burns** (future CIA Director) with Reid Hoffman and Peter Thiel.
- The **exact category of weapon** described in these documents — pulsed RF/electromagnetic energy targeting the brain — has now been confirmed by the Pentagon, which acquired and tested an actual device in 2024–2026 linked to Havana Syndrome.

Part I: The Smoking Gun — bgC3 Deliverables

The Email That Started Everything

On March 3, 2017, **Melanie Walker** — a board-certified neurosurgeon and neurotechnology adviser to Bill Gates — sent an email to Gates at his private address (billg@bgc3.com), CC'd to Larry Cohen (bgC3's CEO). The subject line: **"bgc3 Deliverables and Scope."**

The email proposed five work products:

1. Blueprint for a zero-knowledge-proof digital system to secure private personal health information
2. Whitepaper on consumer health expenditures in the USA
3. **Whitepaper and/or recommendations on neurotechnologies related to chronic/degenerative disease**
4. **Whitepaper on Neurotechnologies as weapons in national intelligence and defense**
5. **Follow-up recommendations and/or technical specifications for Strain pandemic simulation**

This email was forwarded to Jeffrey Epstein. His reply: **"ok."**

■ **Document: EFTA02657725 (NUCLEAR tier)** — *The final version sent to Gates.*

■ **Document: EFTA02658424** — *An earlier draft (February 24, 2017) that listed a full advisory network including **Geoff Ling (former DARPA director)**, Nobel laureates Paul Greengard and Linda Buck, Yann LeCun (Facebook AI), Todd Park (former US CTO), and Nandan Nilekani (architect of India's Aadhaar biometric system). This version also named institutional partners: the **WEF Global Future Council on Neurotechnology and Brain Science**, Stanford's Shenoy Lab, and Caltech's Koch Lab.*

■ **Document: EFTA02365313** — *A drafting-phase version with Epstein's inline edits. Epstein comments: "i just think digital health gives larry too much room to make trouble" and "crypto health."*

Epstein was not merely receiving these proposals. He was editing them.

What Is bgC3?

bgC3 — "Bill Gates Catalyst 3" — was established as Carillon Holdings in March 2008 and re-named ten days after Gates retired from day-to-day work at Microsoft. It was Gates's private think tank, distinct from both the Gates Foundation and his investment vehicle Cascade. In

2018, it was rebranded as **Gates Ventures**.

Larry Cohen served as CEO. Boris Nikolic served across both bgC3 and the Foundation. And Melanie Walker held the title of “**neurotechnology and brain science adviser to William H. Gates III at bgC3**” — per her own World Economic Forum biography.

The bgC3 deliverables document reveals that Gates’s private office was not merely interested in neurotechnology for therapeutic purposes. Item 4 explicitly scoped **weapons applications** as a work product. This was not a casual mention — it was a formal deliverable with named advisors including a former DARPA director.

The “Strain” Pandemic Simulation

Deliverable #5 — “Follow-up recommendations and/or technical specifications for **Strain pandemic simulation**” — predates the publicly announced Event 201 pandemic tabletop exercise (October 2019) by more than two years. Event 201, hosted by Johns Hopkins in partnership with the WEF and the Gates Foundation, simulated a novel zoonotic coronavirus. The earlier “Strain” simulation has received less scrutiny, and its full scope remains unclear from the released documents.

Pandemic preparedness exercises are standard practice in public health. What is unusual here is the bundling: a single deliverables document proposing weapons applications of neurotechnology alongside pandemic simulations, authored by a neurosurgeon who was simultaneously reporting to a convicted sex offender on the private activities of one of the world’s richest men.

Part II: Melanie Walker — The Bridge

From the Plaza Hotel to the Gates Foundation

Melanie Walker’s story begins in 1992. A recent college graduate from Texas, she was sight-seeing at the Plaza Hotel in New York when she was introduced to Jeffrey Epstein by **Donald Trump**. Epstein offered her a Manhattan apartment and promised modeling opportunities at Victoria’s Secret to encourage her relocation to New York.

By 1998, while doing postdoctoral work at Caltech in computational neurobiology, Epstein hired her as his “**science advisor**” — a role that involved identifying and connecting him with academics whose work he might fund.

Her credentials are genuine and formidable: - Graduated summa cum laude, University of Texas - Medical degree with highest honors, UT Medical Branch (1998) - Board certified in Neurology, Vascular Neurology, and CNS Endovascular Surgery - Postdoctoral training at Caltech (computational neurobiology) and Harvard (palliative care) - Currently Clinical Professor of Neurological Surgery at the University of Washington

The Introduction Chain

Walker married **Steven Sinofsky**, then president of the Windows Division at Microsoft. Through Sinofsky, she met Bill Gates at a Microsoft company barbecue in the early 2000s. Walker then introduced **Boris Nikolic** (Gates's chief science advisor) to Epstein. Nikolic in turn facilitated the **first Gates-Epstein face-to-face meeting** in January 2011.

This chain — Walker → Nikolic → Gates — is how Epstein gained access to one of the world's most powerful people. And the chain ran in both directions.

Intelligence Source Inside the Gates Orbit

Released DOJ documents reveal Walker functioned as Epstein's intelligence source within Gates's inner circle:

- **July 2011:** Relayed intel about Microsoft leadership turmoil, telling Epstein that Gates was considering returning to run the company and that Gates believed Sinofsky was *"too mean to be a CEO."*
- **January 2017:** Reported that Gates wanted *"insider baseball"* but contact had to occur *"through trusted third party as he is watched very closely"* — citing Melinda Gates as the obstacle.
- **July 2017:** Text to Epstein: *"He's very gross you have no idea. Not the person ppl think."*
- **2018:** Reported to Epstein: *"He's trapped but he has no desire to change anything"* — discussing Gates's personal state.
- She volunteered that Gates *"loves"* Epstein but Melinda Gates prevented direct communication.

Walker was running **\$300 million in Gates Foundation portfolios** while simultaneously providing this intelligence to Epstein. In early 2017, when Melinda Gates personally managed Walker's separation from the Foundation, Gates offered a six-month arrangement at bgC3 as a transition — the same bgC3 from which the neuroweapons deliverables were proposed.

The "Blue Dress" Emails

In September 2017, when Walker faced difficulties at the Gates Foundation, Epstein advised her to use their relationship as leverage:

■ "you should know that I've told jeffrey everything — everything."

Epstein referenced "blue dresses" — an apparent allusion to the Monica Lewinsky dress that contained DNA evidence. Six weeks later, Walker said she had *"'blue dress' emails"* and joked about *"auctioning his body fluids on eBay."* She ultimately chose not to pursue confrontation.

The Middle East as Laboratory

Per released DOJ documents, Walker told Epstein the Middle East was “**perfect**” as a laboratory “*to test clinical wearables and experiment with remote telemetry due to no legal or policy restrictions.*”

This statement — from a neurosurgeon advising one of the world’s richest men on neurotechnologies as weapons, communicated to a convicted sex offender who brokered introductions to intelligence officials — encapsulates the convergence of interests this investigation has uncovered.

Modern Neuron: The Neurotechnology Startup

On September 14, 2017, Walker wrote to Epstein proposing the creation of “**Modern Neuron**” — a concept-driven neurotechnology company:

| Document: EFTA02622411

- 9–12 month incubation period to file intellectual property and demonstrate proof of concept
- “*The science is being performed elsewhere in the body (heart, liver, muscle) and I want to act quickly to own the neuro applications*”
- Asks Epstein to help her “*do this quietly, with tons of integrity and lots of support*”
- Advisors: 2 Nobel laureates (Dr. Watson and Dr. Buck), former NIMH director (Dr. Insel), former NCI director (Klausner), **former DARPA director (Dr. Ling)**, and director of Focused Ultrasound Foundation (Dr. Kassell)

Four days earlier (EFTA02396878), a Google Drive invitation to a “Modern Neuron” shared folder was sent to Epstein.

In October 2017 (vol00009-efta00680010-pdf), Walker emailed Casey Tegreene at Intellectual Ventures, CC’ing Bill Gates:

| “Last week I presented my ideas to Bill, and I asked him if we could incubate a small business... we would call Modern Neuron... Bill asked if we should do as a private company or public good and we decided we would speak with you.”

No public records of “Modern Neuron” as an incorporated entity were found. Walker’s current work at UW — leading first-in-human clinical trials on mitochondrial transplantation for stroke — appears to be the scientific continuation of these ideas through legitimate academic channels.

Walker's Scientist List

On October 3, 2017, Walker sent Epstein a curated list of 17 scientists (EFTA02361620), including:

Scientist	Institution	Research
Ted Berger	USC	Hippocampal memory prostheses (DARPA-funded)
Neal Kassell	Focused Ultrasound Foundation	Non-invasive brain modulation via ultrasound
Susumu Tonegawa	MIT	Memory and false memory
Michael Levin	Tufts	Morphogenetic code
Shai Efrati	Tel Aviv University	Hyperbaric medicine

Each of these researchers works at the frontier of technologies with dual-use potential — therapeutic applications that could, in principle, be redirected toward surveillance, interrogation, or weapons development.

Part III: The Neuroscience Network**Ed Boyden — “Control Knobs for the Brain”**

Edward Boyden is the Y. Eva Tan Professor in Neurotechnology at MIT, co-developer of **optogenetics** — a technique that uses genetically encoded light-sensitive proteins to activate or silence specific neurons with millisecond precision.

His engagement with Epstein was extensive:

- **May 23, 2013:** Boyden writes to Epstein after a meeting: *“it was great chatting about all the ways neuroengineering is going to go in the coming years, revealing both fundamental mechanistic brain maps, and providing the **control knobs for fixing brain disorders** and understanding complex phenomena like consciousness.”*
- He described the potential to *“stimulate the brain and play back an activity pattern into the brain”* — essentially, recording a person’s neural activity and then replaying it.
- **August 2013:** Boyden traveled to Epstein’s Zorro Ranch in New Mexico alongside Martin Nowak. Epstein reimbursed Boyden’s JetBlue flights.

- **July 14, 2014:** Boyden writes: *“the Obama BRAIN Initiative is running strong, and MIT has a good bid for a seat at the table.”*
- **969 file mentions** — one of the highest counts among scientists in the Epstein Files.

Boyden later stated: *“I was uncomfortable at these meetings knowing that Epstein had been convicted of a serious crime. I didn’t act upon this discomfort, and I deeply regret attending these meetings and presenting my research at them.”*

The Baume Dinner: Neuroscience as Social Currency

On August 2, 2015, Reid Hoffman hosted a dinner at the two-Michelin-starred **Baume** restaurant in Palo Alto, honoring Ed Boyden. Hoffman “bought out” the entire restaurant.

Document: EFTA00344556 (NUCLEAR tier) — Full guest list:

Guest	Role
Ed Boyden	MIT neuroscientist (honoree)
Reid Hoffman	LinkedIn co-founder
Mark Zuckerberg	Facebook CEO
Priscilla Chan	Zuckerberg’s wife
Elon Musk	Tesla/SpaceX CEO
Peter Thiel	PayPal co-founder
Jeffrey Epstein	Convicted sex offender
Joi Ito	MIT Media Lab director
Desiree Dudley	Boyden’s MIT colleague
Navaid Farooq	Musk’s former college roommate

Three days later, Hoffman emailed Zuckerberg and Epstein: *“email connections from the Ed Boyden dinner — so that convo can continue.”* Epstein subsequently boasted to billionaire Tom Pritzker about the “wild” dinner.

This was neuroscience as social currency: Epstein used his access to cutting-edge brain research to remain relevant to the most powerful people in technology, even after his 2008 conviction.

The “Deception” Dinner Series

Documents: *EFTA01932569, EFTA01936090, EFTA02580954, EFTA02113944* —
March 14, 2014

Two competing dinner events were planned at Epstein’s residence: **“Dinner w/ Bill Gates”** and a **“Deception Dinner”** with: - Neil Gershenfeld (MIT) - Ed Boyden - Judith Donath (Harvard) - Sebastian Seung (Princeton)

Staff asked: *“DO WE CANCEL”* the science dinner if Gates confirmed.

Calendar entries confirm: *“12:00pm Lunch w/ Neil Gershenfeld, Judith, Ed, Sebastian for Neuro/Deception (Neil’s office E15-401)”*

The juxtaposition is telling: Epstein was hosting simultaneous events on neuroscience, deception research, and billionaire access — and the calendar treated them as interchangeable.

Epstein’s “Secret Society”

Document: *HOUSE_OVERSIGHT_027232*

In a communication with an intelligence source later identified as Melanie Walker, Epstein explicitly characterizes his inner circle:

“both are welcome to our secret society, they will join joi ito ed boyden and caleb (mit agro).”

Epstein’s own words frame this network not as casual philanthropy but as a closed, invitation-only group centered on MIT neuroscience.

BrainMind: The Summit That Wouldn’t Die

BrainMind is a neuroscience organization co-founded by Michael McCullough (UCSF, EIR at Greylock Partners). Its advisory board reads like a roster of Epstein’s scientific contacts:

- **Reid Hoffman** — Co-Founding Advisor
- **Ed Boyden** — Core Advisor since 2018
- **Geoff Ling** — Founding Director of DARPA’s Biological Technologies Office

Epstein received formal invitations to BrainMind summits:

EFTA01004030 (August 2018): *Stanford summit invitation from Reid Hoffman, Chair of the Advisory Board.*

EFTA01029069 (February 6, 2019): *MIT summit save-the-date — “Dear Jeffrey, Please save the date for May 4–5, 2019.” Topics: neural basis of consciousness, brain in love, psychedelics, AI in clinical brain health, wearable neurotechnology.*

EFTA01029072 (February 6, 2019): **THE LAST KNOWN EMAIL.** *Epstein replies: “thanks, if i come to the west coast. will you have the courage to meet? :)” — Five months before his arrest.*

Part IV: The DARPA Connection

Geoff Ling: From DARPA to the Epstein Network

Colonel Geoffrey Ling, MD, PhD (US Army, ret.) held three critical positions: - Program Manager, DARPA Defense Sciences Office - **Founding Director, DARPA Biological Technologies Office** (2014–2016) - Assistant Director for Medical Innovation, White House OSTP — where he helped launch the **BRAIN Initiative**

Ling appears in the Epstein files in two contexts: 1. Named as an advisor for Walker’s

bgC3 deliverables (including the neuroweapons item) 2. Named as an advisor for Walker's **Modern Neuron** startup

He now sits on **BrainMind's team** alongside Ed Boyden.

DARPA's Neurotechnology Portfolio

DARPA has invested an estimated **\$500+ million** across 40+ neurotechnology programs over 24 years. Key programs relevant to this investigation:

Program	Budget	Focus	Key Researchers
REMIND (2009)	~\$15M	Hippocampal memory prostheses	Ted Berger (USC)
RAM (2015–2020)	—	Restoring Active Memory	Berger, UPenn teams
Neuro-FAST	—	Optogenetic read/write of brain activity	Various
N3	\$125M	Next-Gen Nonsurgical Neurotechnology	Ultrasound + magnetic approaches
SUBNETS	—	Deep brain stimulators for PTSD	Multiple teams

DARPA's N3 program is particularly significant: it funds research specifically aimed at removing the surgical requirement for brain-computer interfaces, pursuing approaches including **focused ultrasound** and **magnetogenetics** — technologies that could enable remote neural interaction without implants.

Ted Berger's Memory Prosthesis

Ted Berger (USC), who appears on Walker's scientist list, spent 30+ years developing a **hippocampal memory prosthesis** — a silicon chip that can replace the function of a damaged hippocampus. In 2018, his team demonstrated a **37% improvement in episodic memory** in human patients — the first successful prosthetic memory device in humans.

His work was funded primarily by DARPA's REMIND and RAM programs. The dual-use implications are obvious: a technology that can restore memory can, in principle, be adapted

to modify, erase, or implant memories.

Neal Kassell and Focused Ultrasound

Dr. Neal F. Kassell, former Co-Chair of Neurosurgery at the University of Virginia, founded the Focused Ultrasound Foundation in 2006. Focused ultrasound can target brain regions with cubic-millimeter precision, either destroying tissue (high intensity) or modulating neural activity (low intensity) — all non-invasively.

In September 2018, Walker introduced Kassell to Epstein via email, writing that she had known Epstein for **28 years** and that Donald Trump introduced them. A meeting followed on September 25 in New York. Kassell emailed Epstein the next day: *“Enjoyed our meeting. Thanks for taking the time.”*

The significance: focused ultrasound requires no genetic modification, no surgical implants, and no physical contact. DARPA’s N3 program specifically funds it as a path to nonsurgical brain-machine interfaces for military applications. It is the technology closest to enabling the kind of remote neural interaction that the term “neuroweapon” implies.

Part V: The Power Network

Gates-Epstein: Forty Meetings Over Eight Years

The documented Gates-Epstein relationship spans at least **2010 to 2018**:

Date	Event
Jan 31, 2011	Gates visits Epstein’s NYC townhouse (with Eva Andersson-Dubin and her 15-year-old daughter)
May 3, 2011	Gates visits Epstein’s mansion again
Feb 2013	Nikolic arranges private meeting
Mar 1, 2013	Gates flies on Epstein’s private jet
Jun 2013	Nikolic rearranges Gates’s schedule for Paris meeting
Sep 2013	Dinner with Bill and Melinda Gates, Larry Summers
2013–2014	At least four additional meeting days documented

Date	Event
Sep 8, 2014	Epstein arranges six hours of meetings for Gates across four NYC locations
Mar 2017	bgC3 neuroweapons deliverables forwarded to Epstein
Feb 2018	Last documented Epstein-to-Gates communication (MBS/Saudi nuclear)

Gates initially said Epstein was not a friend and they had no business relationship. By 2021, he called it a “*huge mistake*.” By February 2026, Gates reportedly apologized publicly and admitted to two affairs.

The Gates Foundation blocked Epstein’s IP address as early as February 2011 (EFTA02381230) — yet the relationship continued through personal email channels for **eight more years**.

Boris Nikolic: Named in the Will

Boris Nikolic, Gates’s chief science advisor and the primary intermediary between Gates and Epstein, was named as a **backup executor of Epstein’s will** — signed just two days before Epstein’s death. Nikolic claimed he was “shocked” and had no intent to fulfill these duties.

Nikolic negotiated a **\$5 million severance** from the Gates Foundation in July 2013, reportedly with Epstein’s assistance. He called Gates his “*best friend*” in released emails.

Reid Hoffman: Co-Founding Advisor to BrainMind

Hoffman organized the Baume dinner, introduced Epstein to Mark Zuckerberg, visited Epstein’s island, and chaired BrainMind’s advisory board. He acknowledged in 2019: “*By agreeing to participate in any fundraising activity where Epstein was present, I helped to repair his reputation and perpetuate injustice.*”

The CIA Director Connection

Document: EFTA02366807 (NUCLEAR tier)

Epstein offered to connect Reid Hoffman **and** Peter Thiel with **William Burns** — who would later become Director of the Central Intelligence Agency. Burns responded: “*That would be fine.*”

Burns’s private calendar (obtained by the Wall Street Journal in 2023) shows three scheduled meetings with Epstein in 2014, when Burns was deputy secretary of state. A CIA

spokesperson said Burns “*did not know anything about him, other than that he was introduced as an expert in the financial services sector.*”

The Seminar-MONEY Guest List

| Document: EFTA01770249

Epstein’s curated intellectual salon, “Seminar-MONEY,” included: - Bill Gates - Jeff Bezos - Sergey Brin - Larry Page - Nathan Myhrvold - Boris Nikolic - Daniel Kahneman (Nobel laureate, behavioral economics) - Michael Milken

This wasn’t a philanthropy discussion. It was a private gathering of the world’s most powerful technologists, coordinated by a convicted sex offender who was simultaneously editing proposals about neurotechnologies as weapons.

Part VI: The Weapon Is Real

Havana Syndrome: From Theory to Hardware

In 2024, Homeland Security Investigations purchased a device through an undercover operation, paying **eight figures** (tens of millions) using Defense Department funding. The device:

- Is **portable and backpack-sized**, designed for concealment
- Contains **Russian-manufactured components**
- Emits **pulsed microwave/radio-frequency energy** with a waveform that “*rises and falls abruptly and pulses rapidly*”
- Is programmable, remote-controlled, silent, and produces no heat
- Has a range of **several hundred feet** and can penetrate windows and drywall
- Was purchased from a **Russian criminal network**

The Pentagon has been testing this device at a U.S. military laboratory for over a year on **rats and sheep**. CBS 60 Minutes reported in March 2026 that the injuries produced are **consistent with those observed in human Havana Syndrome victims**.

The Norwegian Self-Experiment

In 2024, a Norwegian government scientist — a **prominent skeptic** of the directed-energy theory — built his own pulsed microwave device and tested it on himself to prove such weapons were harmless. Instead, he suffered **brain damage**: extreme headaches, vertigo, memory loss, hearing loss, brain fog, and nausea. The Norwegian government alerted the CIA, and Pentagon and White House officials visited.

The Technology Overlap

The connection between the Epstein network's neurotechnology interests and confirmed directed-energy weapons is not speculative. The technologies are the same physics:

Legitimate Research	Weapons Application
Transcranial focused ultrasound (Kassell, DARPA N3)	Focused energy to disrupt neural function at range
RF/microwave brain stimulation (TMS, tDCS)	Pulsed microwave weapon causing Havana Syndrome
Optogenetics (Boyden, DARPA Neuro-FAST)	Neural control via light (requires implant — not yet remote)
Memory prostheses (Berger, DARPA RAM)	Memory modification or implantation
DARPA N3 nonsurgical interfaces (\$125M)	Bidirectional remote neural access without surgery

As Stanford's Dr. David Relman explains: pulsed microwaves can stimulate electrically active brain tissue, *"mimicking what the brain normally does but now you're driving it with your pulses from the outside."*

In January 2025, two U.S. intelligence agencies changed their assessments, now judging it **likely** that a foreign actor possesses an anti-personnel directed-energy capability. The 2023

consensus that foreign involvement was “very unlikely” has been overturned by the physical evidence.

Part VII: The Timeline

Viewed chronologically, the pattern becomes unmistakable:

Year	Event
1992	Walker meets Epstein (introduced by Trump)
1998	Epstein hires Walker as “Science Advisor”
2006	Walker joins the Gates Foundation
2009	Walker proposes Neuro Nobel Roundtable to Epstein; plans to involve Gates and Boris Nikolic
2010	Walker working with Nobel laureate Paul Greengard on vagus nerve research; Nikolic facilitates first Gates-Epstein meeting
2011	Gates visits Epstein’s NYC townhouse (twice); Gates Foundation blocks Epstein’s IP; Walker reports Microsoft intel to Epstein
2012	Epstein attends Pritzker Neuro Consortium (Chicago); meets Dr. Richard Axel at Neuroscience Institute
2013	Regular dinners with Boyden; “Deception” dinner series; Boyden visits Epstein’s ranch; dinner with Boyden, Ito, and Woody Allen; Gates flies on Epstein’s jet
2014	Allen Brain Institute tour arranged through Gates’s office; William Burns meets Epstein three times; “Deception” dinners at Epstein’s home
2015	Baume dinner (Boyden, Zuckerberg, Musk, Thiel, Hoffman, Epstein); Hoffman introduces Epstein to Zuckerberg

Year	Event
2017 (Feb)	Walker drafts bgC3 deliverables including “neuroweapons” and “Strain” simulation; Epstein edits
2017 (Mar)	Final bgC3 deliverables sent to Gates, forwarded to Epstein
2017 (Aug)	Epstein directs Ito on what to present Gates about Alzheimer’s; edits Walker’s emails to Gates
2017 (Sep)	Walker proposes Modern Neuron to Epstein; sends 17-scientist list; presents to Gates
2017 (Oct)	Walker pitches Modern Neuron to Intellectual Ventures, CC Bill Gates
2018 (Feb)	Last documented Epstein-to-Gates communication (MBS/Saudi nuclear)
2018 (Jul)	Walker reports to Epstein on Gates (“trapped”), Hoffman’s “brain thing” with Boyden
2018 (Aug)	BrainMind Stanford summit invitation to Epstein (from Hoffman)
2018 (Sep)	Walker introduces Neal Kassell (Focused Ultrasound Foundation) to Epstein; Kassell meets Epstein in NYC
2019 (Feb)	BrainMind MIT summit invite — last known email : “ <i>will you have the courage to meet? :)</i> ”
2019 (Jul)	Epstein arrested
2019 (Aug)	Epstein dies in custody; Nikolic named backup executor of will
2024	Pentagon acquires actual directed-energy weapon through undercover operation
2025 (Jan)	Two intelligence agencies upgrade Havana Syndrome assessment to “likely” foreign actor
2026 (Jan)	DOJ releases 3.5 million pages of Epstein files

Year	Event
2026 (Mar)	Pentagon animal testing confirms device produces injuries consistent with Havana Syndrome

Part VIII: What Were They Up To?

The Most Probable Narrative

The documents do not reveal a single conspiracy with a single objective. They reveal something potentially more concerning: a **convergence of interests** among people who should never have been in the same room.

Epstein's role was that of a broker — a human switchboard connecting scientists who needed funding, billionaires who wanted access to cutting-edge research, and government officials who controlled defense and intelligence programs. His currency was access, and neuroscience was his most valuable commodity.

Walker's role was the technical translator — a genuine neurosurgeon who could evaluate science, propose deliverables, and draft whitepapers that bridged the gap between laboratory research and defense applications. She operated simultaneously inside the Gates Foundation, bgC3, the World Economic Forum's Global Future Council on Neurotechnology, and Epstein's "secret society."

Gates's role remains ambiguous in the documents. He received the neuroweapons deliverables proposal. He discussed Modern Neuron with Walker and suggested involving Intellectual Ventures. He met with Epstein dozens of times over eight years. Whether he actively directed the weapons-related work or merely tolerated its presence in a broad deliverables document is not settled by the available evidence.

The scientific participants — Boyden, Kassell, Berger, and others — appear to have engaged with Epstein primarily as a funding source. But the line between "funding source" and "intelligence broker" was never clear, and Epstein's characterization of his inner circle as a "**secret society**" suggests the participants understood this was not ordinary philanthropy.

Three Hypotheses

Hypothesis 1: Intelligence Operation. Epstein was acting as an intelligence broker (possibly for multiple services) using neuroscience as cover for identifying and developing dual-use technologies with defense applications. The connection to William Burns (CIA), the

DARPA personnel on advisory lists, Walker's suggestion that the Middle East was "perfect" for testing "*due to no legal or policy restrictions*," and the confirmed existence of directed-energy weapons of exactly the type described — all point in this direction.

Hypothesis 2: Venture Capitalist with a Blackmail Portfolio. Epstein used neuroscience access to maintain relationships with billionaires (Gates, Zuckerberg, Musk, Thiel) for financial benefit, while accumulating compromising information as insurance. The "blue dress" emails, Walker's intelligence reports on Gates, and the mixing of convicted sex offenders with married tech CEOs at intimate dinners all support this reading.

Hypothesis 3: Both. These are not mutually exclusive. An intelligence broker who uses compromising relationships as leverage is a well-documented pattern. The neuroscience interest served multiple functions simultaneously: it provided legitimate cover for meetings, generated real intellectual property, created dependency relationships with scientists, and produced dual-use knowledge with defense value.

The evidence most strongly supports Hypothesis 3.

Methodology

This report was generated through:

1. **Database mining** of three SQLite databases: kabasshouse.db (intelligence datasets with curated_docs, financial_transactions, derived_events, and recovered_redactions tables), jmail.db (73,000+ emails from the Epstein archive), and unsealed.db (document catalog).
2. **Keyword searches** across all text fields for terms including: neuroweapon, neurotechnology*, cybertorture, directed energy, RF/EMF, biojack, mind control, brain interface, psychotronic, Havana syndrome, focused ultrasound, optogenetics, and names of all identified persons and organizations.
3. **Cross-database hydration:** document IDs found in one database were queried against all others for additional metadata, context, and connections.
4. **Network analysis:** all persons appearing in neuroweapon-adjacent documents were traced through every available table to map their full connection graph.
5. **Adjacent document analysis:** for each file_key found in neuroweapons-related documents, nearby file_keys (within +/- 50 of the numeric portion) were checked for related material.
6. **Web research** for background on all identified persons, organizations, technologies, and events, with source verification through multiple outlets.

All document references cite EFTA file keys that can be verified against the DOJ Epstein Library (justice.gov/epstein) and the Unsealed database on this site. Email excerpts are

from OCR-processed scans of original correspondence.
